

# ***PTI*** your supplier for the food and beverage industry

PTI Europa A/S newsletter

March 2015

Welcome to PTI's second newsletter. This time containing information about what we can do for you as a supplier in the food and beverage industry.

## **The food and beverage industry**

Is a industry where the competition on both the national and international market is very hard. The world population is constantly growing and we, as consumers, demand food to competitive prices and in a good quality.

PTI can be your business partner with transmission parts for the food and beverage industry. We supply a wide product range of stainless steel bearings and transmission parts, waterproof thermoplastic and plastic housings and also specially designed solutions that can fulfil the requirements of your production needs.

PTI has for several years been the main supplier of bearings for Meyn Food Processing Technology B.V who is a world-wide supplier, manufacturer and developer the for poultry processing industry.

## **In this issue**

- Food and beverage industry
- Stainless steel applications
- Waterproof and thermoplastic housings
- Accessories
- Interview with Meyn Food Processing Technology B.V.

# Stainless steel applications

Transmission parts for the food and beverage industry often have to endure harsh environments, where the hygiene has to be at its very best and without the risk of contaminating the food or liquids they are in contact with. We supply a complete and flexible program that accommodate these demands.

We keep a wide range of different stainless steel bearings in stock, from ball bearings with a shaft size from 8 mm up to 120 mm. Our ball bearings are fabricated from steel AISI 440C and are mounted with double seals that efficiently keep liquids out. Our seals and grease meets the requirements of the food industry with reference to FDA/EC1935/2004.

PTI provides pillow block and flanged housings in stainless steel as well as thermoplastic with stainless steel bearing inserts. Our housings are with a solid base bottom, which prohibits dirt and bacteria to grow underneath the housing.

PTI roller chains can be delivered in both stainless steel and corrossions resistant versions.

We can also offer specially designed solutions for example special seals, colours, markings, grease types and much more. See our stainless steel and corrosion resistant program [here](#) or on our homepage under: Products - Corrosion resistant

## Advantages of water proof units

- Protects the bearing against water, dust, humidity and chemicals.
- Especially suitable for dirty environments and/or the food and pharmaceutical industry.
- The cover can be dismantled for inspection of the bearing.
- The cover can be provided as an open and closed solution and in custom-made colours.
- The housings can, on demand, be provided with an antibacterial coating.
- For more information please visit our homepage: Products → Corrosion resistant or [here](#).

## Waterproof units

In our first newsletter we informed about our new waterproof bearing units, which is specially suitable for the food and beverage industry. See more [here](#) or on the front of our homepage.

## Refillable automatic lubricator

All pillow block and flanged housings can be mounted with a grease container filled with FDA approved grease.

The grease containers can be mounted both indoors, outdoors and even under water and can be placed where the access is limited. With these grease containers you are ensured that the bearing gets the right amount of lubrication, hereby preventing expensive repairs and save money in the long run. The transparent design makes it easy to keep track of the remaining grease.

The grease interval can easily be adjusted to for example 1, 3, 6 or 12 months. Suitable adapters can be delivered for different housings. See more [here](#) or on our homepage:

## Interview with Meyn Food Processing Technology B.V.

For this issue of our newsletter we have interviewed Eline Versteeg, Corporate and internal communication responsible, at Meyn Food Processing Technology B.V.

### Who is Meyn?

Eline, Meyn - *"Meyn has been fully dedicated to poultry processing for many years now. Our knowledge, equipment, systems and services are available all over the world. Today we are very proud to be the dedicated business partners of numerous renowned poultry processing companies in over a hundred countries."*

*The world population continues to grow and the level of prosperity in upcoming markets is increasing rapidly. Global demand for animal protein is expected to grow accordingly. More mouths to feed means major market opportunities for your business, but it also brings serious challenges. How can you feed the world responsibly without jeopardizing your competitive edge and business continuity?*

*Working with Meyn means you can rely on intelligent, innovative, customized and sustainable solutions that enable our customers to meet the challenges of today's market and tomorrow's society. Our customers' success is our goal. Every day, all over the world."*

### Why did we become your supplier?

Eline, Meyn - *"The main reason we have chosen to work with PTI is the good combination of price, technique, logistics and flexibility. You deliver custom made bearings for Meyn and are willing to keep them in stock which enables us to answer to the challenges of our customers."*

### What do we sell to you?

Eline, Meyn - *"We buy all our bearings at PTI, which is about 250.000 pieces per year in 350 special varieties."*

### The future cooperation between Meyn and PTI?

Eline, Meyn - *"We are very happy in the way PTI takes care of its customers so far and how they help us to realize our corporate goals in the field of on time and complete deliveries to our customers."*

*We hope to work with PTI for a long time."*

### About Meyn:

*Meyn Food Processing Technology B.V. manufactures and distributes equipment and systems for the poultry processing industry world-wide.*
